

N 53E

Description

- Measurement ranges 0 ... 20 N to 0 ... 200 kN
- Compression
- Non-linearity ±0.5% FS
- Supply voltage 5 VDC / 10 VDC
- Output 2 mV/V

Model 53E load cells are bonded foil strain gage transducers designed for cost efficient production and testing applications (i.e. press calibration). Engineered compression force measurements up to 200 kN, this model achieves a maximum non-linearity of 0.5% full scale.

Precision gaging techniques and a stainless steel construction provides excellent long-term stability and reliability under severe operating conditions. The Model 53 compression-only load cell has an integral load button machined as part of the load cell. The Model 53 must be mounted on a smooth flat surface for proper operation. Three tapped holes are provided for mounting.

Options

Temperature compensation:	1a	+15 +70 °C (Standard)
	1j	0 +50 °C
	1k	-20 +85 °C
	1m	-25 +110 °C
Electrical termination	6i	Integral underwater cable (Note 3)
	Chang	ged wiring and other cables on request

Notes:

- 1. Allowable maximum loads maximum load to be applied without damage (Note 2).
- 2. Without damage loading to this level will not cause excessive zero shift or performance degradation. The user must consider fatigue life for long term use and structural integrity. All structurally critical applications (overhead loading, etc.) should always be designed with safety redundant load paths.
- 3. Dimension "H" may increase with option 6i. Consult factory. Maximum temperature is 82 °C (180 °F)
